

Rejuvi Seaweed Masks - Overview

Seaweeds such as algae, kelp, etc. contain a unique substance called alginic acid, which can absorb enormous amounts of water to form a viscous, thick and soft gel. In contrast to traditional clay masks, Rejuvi Seaweed Masks utilize this soft gel as a special delivery system achieving deep penetration of the various active ingredients. The gelation of alginic acid is a typical endothermic process so that Rejuvi Seaweed Masks provide a cool, relaxing sensation and are particularly good for sensitive skin. Rejuvi provides four types of Seaweed Gel Masks for specific applications.

Rejuvi Pearl & Silk Mask

Precious pearl powder - a unique organic 'filler', smoothes lines while nourishing the skin with amino acids, protein and a variety of elements to rejuvenate the skin. Silk powder contains special proteins to nourish the skin. Ginseng extract enhances the oxygen supply in blood and promotes skin metabolism. All these ingredients are elements of fundamental oriental beauty and skin care traditions. You will delight in your silky and lustrous skin. This mask is suitable for all skin types including sensitive skin.

Rejuvi Collagen Firming Mask

Vegetable collagen and hyaluronic acid are excellent biological skin moisturizers that permeate the skin with water. Lecithin contains phospholipids – a critical skin component that provides excellent lipophilic nourishment to promote skin firmness and suppleness. These active ingredients rehydrate and nourish the skin, particularly excessively dry skin. This mask is designed for dry or dehydrated skin.

Rejuvi Sea Remineralizing Mask

Seaweeds are rich in mineral salts, trace elements, vitamins and polysaccharide. Most of the seaweed mineral salts and trace elements are essential to the human body. These are the beauty secrets from the sea. By using algae extract, kelp extract and organic minerals, this mask supplies remineralization, rebalancing and revitalization for your skin. Rejuvi Sea Remineralizing Mask can calm skin irritations, itching and redness. Sea Remineralizing Mask is compatible with all skin types.

Rejuvi AHA Conditioning Mask

This mask utilizes multiple alpha-hydroxyl acids and papaya extract to promote the skin's natural exfoliation while it detoxifies and removes debris from the skin. AHA Conditioning Mask is designed for oily skin, combination skin or acne skin. It can be used as a special deep cleansing for all skin types.

Rejuvi Seaweed Masks - General Directions

Each Rejuvi Seaweed Mask package contains 12 pouches. Six of these pouches contain a delivery system called "Basic Pack" and the other six contain specific ingredients called "Active Mask". Since a quick gelling process is involved, it is very important to handle and apply Rejuvi Seaweed Masks properly. The following are the step-by-step directions for all Rejuvi Seaweed Mask.

1. Place the content of one Basic Pack and one active mask into a mixing bowl. A flexible, round, rubber bowl with capacity of 16 fl. oz. (500 ml) must be used.
2. Gently mix the dry powders with a spatula - avoid spilling. The spatula should be large enough to accommodate step 4. It may be much better to put Basic Pack and Active Pack in a plastic bag or big jar. Shake well for 30 - 60 seconds for good mixing and then transfer to the rubber bowl for a very smooth and uniform mask.
3. Measure 3.5 oz. (100 ml) of water in the measuring cup provided. Tap, filtered or spring water are all acceptable (at ambient temperature), then quickly pour water into mixing bowl.
4. After pouring water, immediately mix vigorously with the spatula to a homogeneous paste (initially stir carefully to avoid spilling powder). It takes 30 to 90 seconds. The mixing time is controlled by the applicability of the paste (not too thin or too thick).
5. Using the spatula, apply quickly and evenly over face. Leave on the skin for 15-20 minutes. For better application results, a head band should be used to hold hair back and eyes should be covered with cotton pads. It is recommended to use very coarse gauze (available from suppliers) to cover the face so that the mask would not flow to undesirable area and make easy to remove afterwards. Another option is to use several pieces of facial tissues to cover undesirable areas including ears (only allow exposure of the area to be treated). A face cream may be used to adhere tissue to skin.
6. Remove the mask by lifting the edge of the mask with fingers. Try to remove the mask in one piece. If breakage or tears occur, continue removing as much of the first piece as possible, then go back and remove remaining small pieces of the mask.
