

A Breakthrough Cosmetic Formula For Unwanted Female Facial Hair

It is very undesirable for women to have mustache, beard and cheek hair (Technical term is called hirsutism). This problem is the result of an underlying endocrine imbalance (increased level of androgen hormones). Estimates indicate that approximately 40% of women have some degree of unwanted facial hair. It is really a widespread and difficult subject !

There are some oral medication and topical drugs for unwanted facial hair. However these medications have low efficacy, side effects and cost issues. The conventional methods are epilation, waxing, shaving, electrolysis and laser hair removal. Discomfort, cost and inconvenience are a drawback for these methods.

Tweezer removal

Laser removal

Electrolysis

Waxing

Rejuvi Retardant Gel for unwanted female facial hair is a unique formulation combining several cosmetic ingredients such as suma extract, chamomile extract, beta-glucan, kinetin, etc. It offers incredible, synergistic function of inhibiting hair follicle activity (slow down hair growth). Compared with relevant medications and cosmetic products on the market, it has shown a considerably better performance without any side effects. Rejuvi Retardant Gel has been tested extensively by an associated Sweden institute. The preliminary test showed over 80% success rate with daily application for 2-3 weeks. Facial hair may regrow after discontinuation of use for over two months. Moreover, there is a great anti-aging benefit on the application area, particularly after epilation. It is an effective, safe, convenient and cost effective new approach for unwanted facial hair.

It is packed in a 1 oz. (30 ml) opaque glass bottle with dispensing pump. Keep in cool place and avoid exposure under sunlight. Apply small amount on a cleansed facial area with unwanted hair twice a day (in the morning and evening). Other products such as creams or lotions can be applied on the top of the gel after its drying. A noticeable result can be observed within 2 to 3 weeks.
